HILLESHÖG®
The Heartbeet of Sweet

Bred for Big Sky ground.

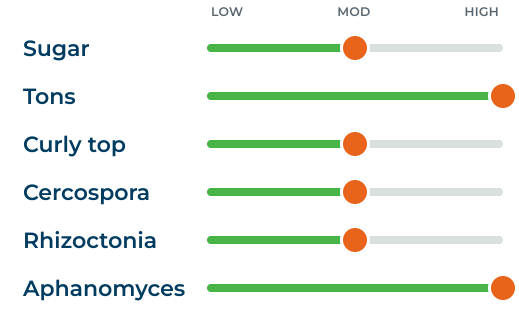
Irrigated ground, a short season, and curly top and root aphid pressure that shows up every season. One Hilleshög variety earned its place in the North for 2027.

THE 2027 LINEUP · WESTERN SUGAR COOPERATIVE – NORTH

01 / 01

HIL2434NT

APPROVED



#2 in RSA at Huntley, 2025

- #4 in sugar per acre over three years
- Moderate curly top, Fusarium, and Aphanomyces tolerance
- Excellent root aphid and nematode tolerance
- Low SLM, very good quality

THE RATINGS

Reading the lineup

Within the lineup.
Low, Mod, and High compare Hilleshög varieties to each other, not to another seed company. Ratings reflect multi-location trials and Hilleshög field data.

NT means nematode tolerant.
An NT variety carries tolerance to the sugarbeet cyst nematode.

Approval status.
Pending varieties are still in the cooperative's approval process for 2027. Check availability with your representative before you order.

BEHIND EVERY VARIETY

Four brands. One gene pool.

Hilleshög draws from the combined expertise of Groupe Florimond Desprez and DLF, four root-crop brands sharing one extensive genetic pool, with new genetics challenged against tomorrow's diseases and pests at the United Beet Innovation Centre long before they reach your planter.

1907
Hilleshög's first sugarbeet breeding

4
root-crop brands, one gene pool
